

**CUA40915 Certificate IV in Music Industry (Sound Production)  
Course Information Brochure**

**Description of Course**

The Certificate IV in Music Industry (Sound Production) includes studies in live audio operations, sound reinforcement, audio mixing and editing using Pro Tools, making a demo recording, ear training, and music performance skills as part of a group. The course is designed to produce well-rounded, knowledgeable, industry-ready musicians and culminates in a professional performance tour of the Victorian Surf Coast region in October of each year. Students have access to the college's state-of-the-art auditorium, recording studios, rehearsal rooms, sound editing software and music facility.

**Activities/tasks**

Sound Production students study audio theory and apply their knowledge in practical and diverse learning environments working closely with colleagues as clients. They gain practical experience in live sound production, become familiar with microphone types and use them in a variety of recording contexts. Sound Production students develop recording plans and run recording sessions in the recording studios using current technologies and software. They record, edit and produce multitrack recordings to a professional standard using Pro Tools. Sound Production students also develop their skills as performers and are given opportunities to perform and record their own songs and contribute to, and record those of their colleagues.

Furthermore, students acquire knowledge and skills designed to assist them in developing careers by researching careers in sound production and music, studying music marketing concepts, developing a business identity, producing business plans and developing an online presence for the dissemination of their work; and they develop a presentation folio for self-promotion to prospective employers, agencies and tertiary institutions.

**Assessment**

Most assessment tasks are project based and culminate in the production of folios of work. Sound Production students produce a folio of recordings and sound editing projects. They are assessed by observation of practical applications of their skills, and they participate in a number of public performances and a performance tour. The assessment of students' overall competence will be undertaken by qualified assessors. Students' competence will be judged using a set of nationally determined criteria. The assessment process will be fair and will include the option of re-sits.

**Eligibility and prerequisites**

To be eligible for entry into this course, applicants must have completed a VCE, VCAL Senior or Year 12 equivalent. A Certificate III in Music Industry would be an advantage. Entry into this course is by audition and interview. Applicants are asked to prepare two contrasting works for audition. The use of backing tracks in auditions is encouraged.

**Benefits of this training**

This course provides pathways into the music industry; and it prepares students for further studies in music or sound production. It provides a broad foundation of knowledge of the music industry and develops 'transferable skills' that can be applied to many fields of employment both within and outside the music industry. Most importantly, this course helps students form music industry networks with like-minded learners and industry professionals.

**Pathways**

This course prepares students for careers in the music industry as performers and sound producers; but it also develops skills that could lead to employment as music entrepreneurs, music venue managers, music festival organisers, tour managers, artist managers, songwriters, composers, live sound operators, recording artists, music tutors, music journalists and concert reviewers. This course serves as a pathway into studies at TAFE or University.

## **CUA40915 Certificate IV in Music Industry (Sound Production)**

BSBCRT401	Articulate, present and debate ideas
BSBIPR401	Use and respect copyright
BSBSMB301	Investigate micro-business opportunities
